

## Bria For IOS and Android Setup Guide

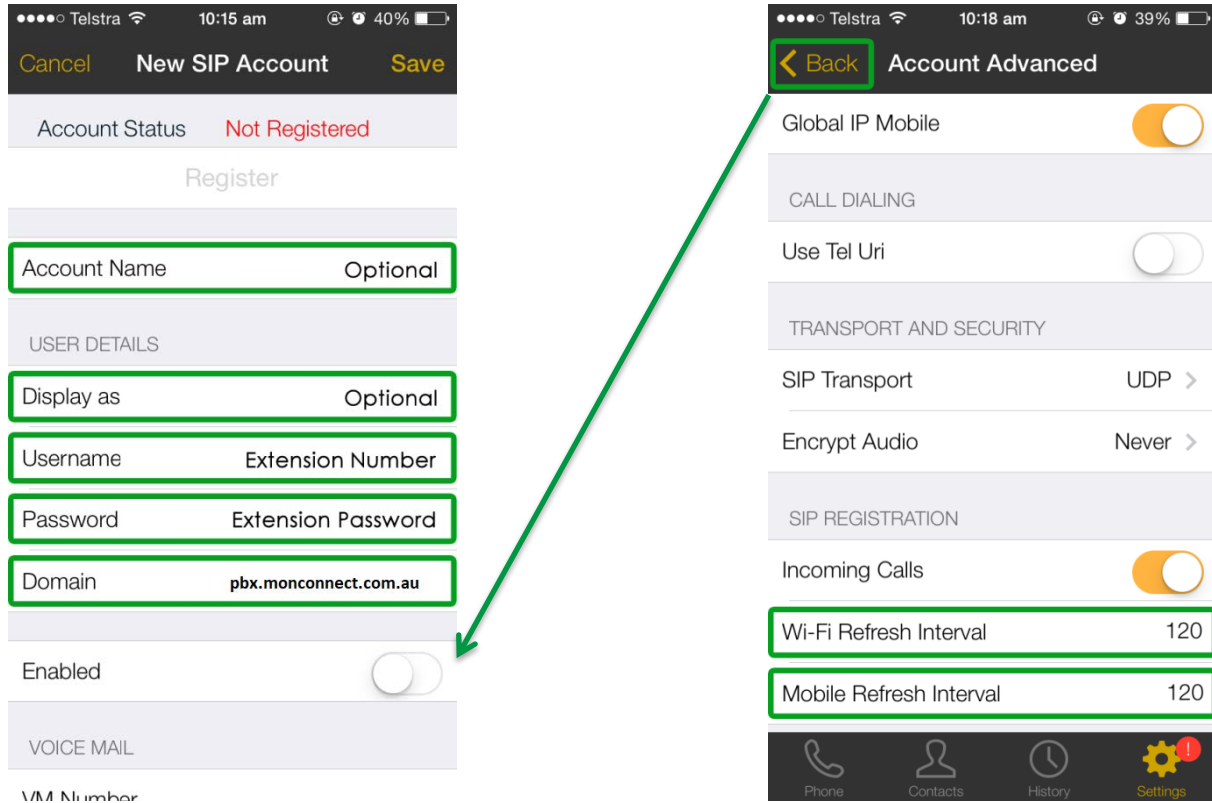

To configure the Bria app to a Montec Connect Extension, first make sure that your device can connect to the internet. When you first start the app up, you will see the following screen:

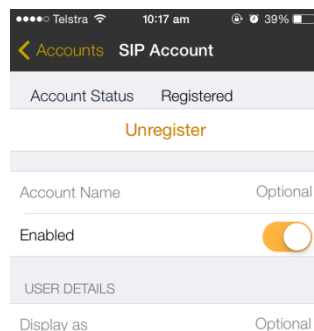

Choose the 'VoIP (SIP) – Calling' to enter in the details required.

On the next page, you will input your Extension information and the SIP Server (***sip.monconnect.com.au*** for Residential and SIP Trunking accounts, and ***pbx.monconnect.com.au*** for hosted PBX accounts) as the bellow screenshot shows:

Once the 'User Details' area has been filled out, click on the 'Advanced' tab and scroll down to the 'SIP REGISTRATION' area. Change the two settings above to 120 (seconds). After this, click back and go ahead and Enable the account.

If the settings were entered correctly then the account should register. You are now free to make and receive calls through the app.
