

## Zoiper For Android Setup Guide

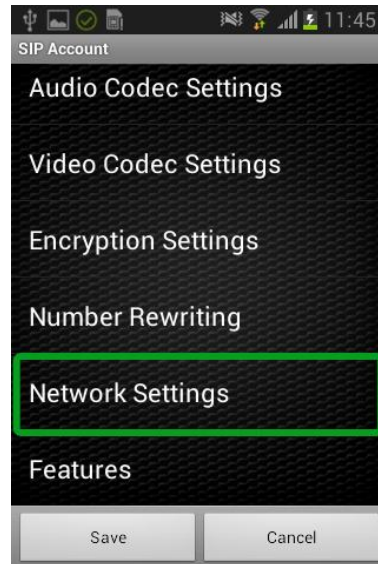

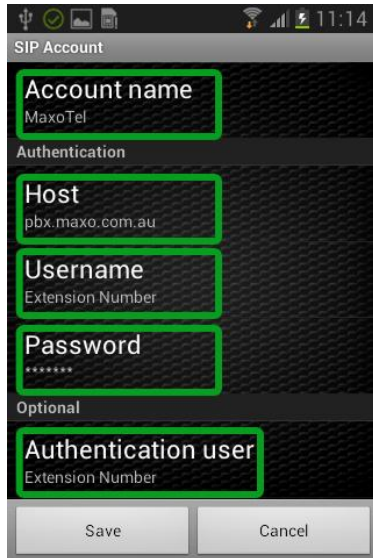

To configure the Zoiper app to a Montec Connect Extension, first make sure that your device can connect to the internet. When you first start the app up, you will see the 'Config' tab from across the top, and then choose 'Accounts'.

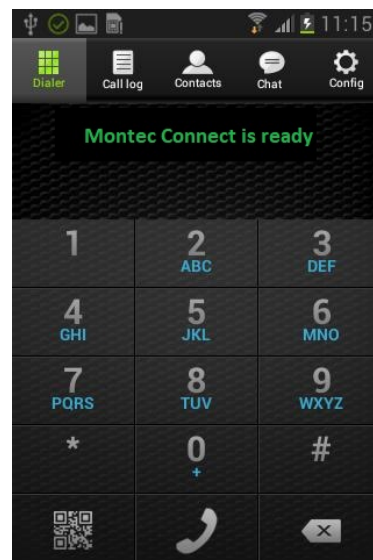

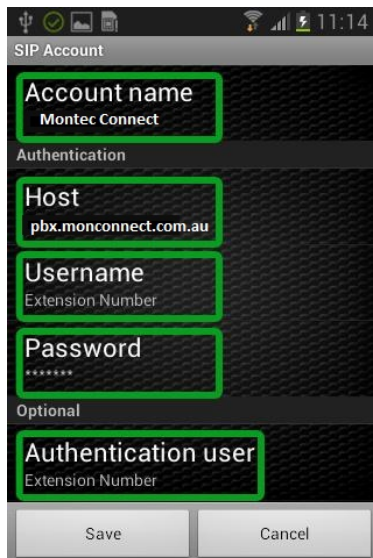

Click 'Add Account' and then choose 'Yes' when it prompts 'Do you already have an account', and then click 'Manual Configuration'.

Choose 'SIP' as the Account type to enter in the details required.

On the next page, you will input your Extension information and the SIP Server (*sip.monconnect.com.au* for Residential and SIP Trunking accounts, or *pbx.monconnect.com.au* for hosted PBX accounts) as the below screenshot shows:

Once the above settings have been filled out, scroll down and click on 'Network Settings'. Change the 'Registration Expiry Time' setting to 120 (seconds). After this, click Save.

If the settings were entered correctly then the account should register. You are now free to make and receive calls through the app.
