

Zoiper For IOS Setup Guide

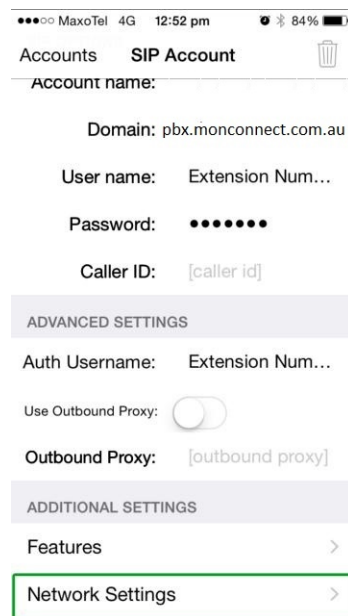

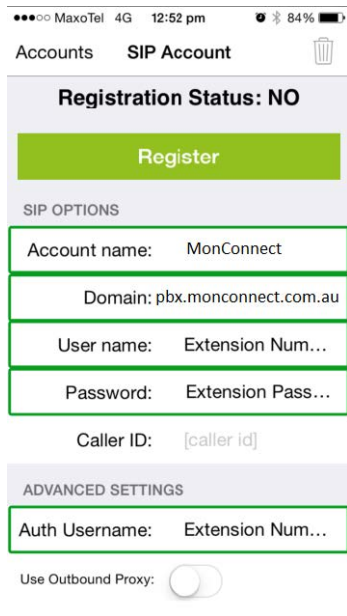

To configure the Zoiper app to a Montec Connect Extension, first make sure that your device can connect to the internet. When you first start the app up, choose the 'Settings' tab from across the bottom, and then choose 'Accounts'.

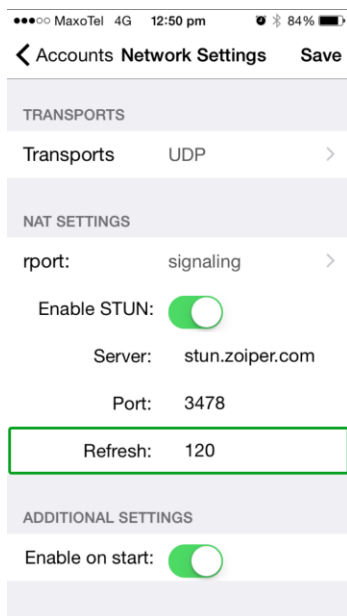

Click the '+' and then choose 'SIP account'.

On the next page, you will input your Extension information and the SIP Server (*sip.monconnect.com.au* for Residential and SIP Trunking accounts or *pbx.monconnect.com.au* for hosted PBX accounts) as the below screenshot shows:

Once the above settings have been filled out, scroll down and click on 'Network Settings'. Change the 'Refresh' setting to 120 (seconds). After this, click Save.

If the settings were entered correctly then the account should register. You are now free to make and receive calls through the app.
