

Zoiper Softphone Setup Guide

To configure Zoiper to your Montec Connect account, first download and install the program. Run the application and Click 'Settings' then choose 'Create New Account'

Once the account wizard shows up, choose 'SIP' as the type and then click next. In the Credentials screen you will place your Extension information and the SIP Server (***sip.monconnect.com.au*** for Residential and Sip Trunk accounts, and ***pbx.monconnect.com.au*** for Hosted PBX accounts) as the bellow screenshot shows:

Once you have filled the fields in with your Extension information, click next and then name the account whatever you want, and then click next again. Now that the Extension is registered, you will need to change the 'Registration Expiry' time. Click on 'Settings' again and then click 'Preferences'. For the registered SIP account, click on 'Advanced', and then change the 'Registration Expiry' to 120 Seconds, and then click 'OK'.
